LIGHT THE WAY TO SAFETY WITH BRADY EXIT SIGNS

Choose luminous signs where exits are not immediately visible to the occupant. Luminous signs are reactivated automatically by exposure to light and are completely safe – non-toxic and non-radioactive. Brady's range of luminous exit and evacuation signs are made from the latest in photoluminescent technology. The material was designed to provide safe LLL (Low-Level-Lighting) egress pathway to ensure the safe evacuation of employees during emergencies and in blackout situations. The BradyGlo™ material provides excellent glow times of 10+ hours without any mechanical or electrical power source after only five minutes charge.

CHANGES TO AUSTRALIAN STANDARD AS 2293 EMERGENCY EVACUATION LIGHTING FOR BUILDINGS

The modifications in this standard comes as a result of changing international trends. It now specifies the use of the "moving person" symbol developed by the International Standards Organisation, instead of the word "EXIT" on illuminated exit signs. Implementation of this change has now become part of the building regulations in the Building Codes of Australia (BCA) publication. However, it is not a requirement at this stage that all existing buildings or buildings already approved for construction to use the new sign. Brady recommends that you contact your local authority in your state or territory for information on your application. For more information, visit www.standards.org.au or www.abcb.gov.au
